

GrüloSmeller Killer

Your smell is our problem!

THE STENCH!

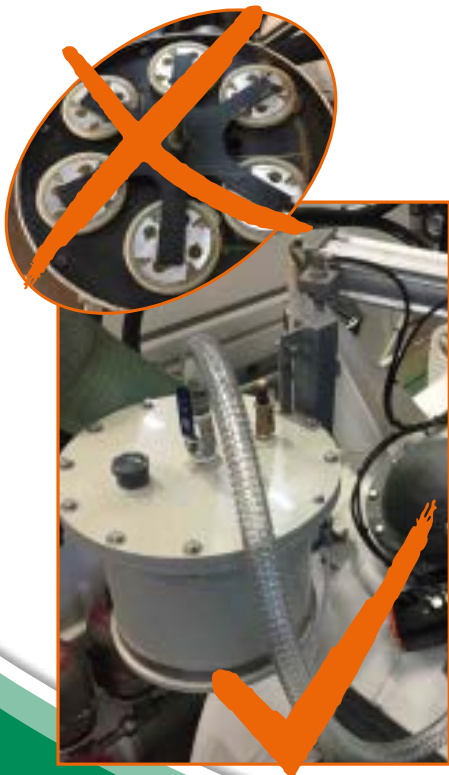

SmellMasterTruck

ODOUR NEUTRALISATION through dry steam procedure

Advantages

- any emission of odorous substances
- low consumption of absorbing liquid
- simple installation in authorised workshops
- temporally flexible disposal without smell
- deployable in continuous operation as well as in regular intervals
- applicable on all types of disposal vehicles
- deployable in odour sensitive areas
- money-back guarantee

Your smell is our problem!

SmellMasterTruck

ODOUR NEUTRALISATION through dry steam procedure

Earn more by odourless disposal of grease separator systems in hotel- and gastronomy business!

The biggest problem for you as disposer in draining and cleaning of grease separator systems and leftover collectors is the smell! The contents develop - particularly during warmer months - an extremely unpleasant odour. This matters especially for hotels and restaurants – they do not wish their guests to be bothered during their stay.

Waste disposal companies taking over these separator contents are therefore only able to do their work out of business hours. Efficient planning of routes is often not compatible with these demands. **Grüning & Loske** addressed this problem developing **SmellMasterTruck**. In several years of work a worldwide unique system was brought to market maturity by our team.

During the suction process resulting exhaust air is impinged with a dry steam mixture in order to neutralise or bind odour causing substances. Thus it is possible for you to provide your service at any time of the day and gain by a better tour capacity. We are sure that you will be enthusiastic about this user-friendly system! Hence **Grüning & Loske** gives a 12 month **"money-back guarantee"** in case you are not content.

The **SmellMasterTruck** convinces apart from outstanding functionality through low-maintenance technology. Furthermore the odour neutralisation can be switched off in case it is not necessary. Installation is done exclusively in authorized workshops nearby. In newly ordered vehicles a bypass can be installed following our technical specifications for the **SmellMasterTruck**. The absorber fluid features a low consumption – on average you can provide more than 1000 customers without changing. Maintenance of the nozzle

sets is due about every 10 months, for this we offer a service contract. In economic terms under 2€ are expended per disposal operation (assuming a 5 year period of use).

Corresponding references from users and their customers are available. The suction vehicle from the company Fetzal Kanaltchnik (Schlins, Austria) is already known as "not-stinking disposer". CEO Helmut Fetzal reports: "Eagerly expecting our first operation using SmellMasterTruck we drove to a leftover container and emptied this. A sensational effect! Where it stank out of the air outlet pipe before now a pleasant smelling airflow exited."

The team of **Grüning & Loske** is proud to present this feature and thereby offer support on this sector. Furthermore we are glad to help communicating with potential customers for marketing.

Apart from this innovative concept for suction vehicles **Grüning & Loske** offers a wide range of hose- and nozzle program as well as odour neutralisation products for sewage systems, manholes and waste collection.

Are bad smells a problem in the future for you as disposal company any longer?

Stop the stench!

Grüning **G+L**oske
